

New Dental Hygiene Legislation Won't Hurt a Bit!

dentisanTM
ADVANCED HYGIENE IN PRACTICE

Infection control in the healthcare sector has become a focus of great public concern. There is increased pressure to demonstrate continuous improvement in training, procedures and performance related to the management of infection risks.

Dentisan's new infection control and cleaning products will make implementing new hygiene regulations simple and effective.

Available exclusively from Claudius Ash, Dentisan's comprehensive suite of products is designed to complement and cover the complete cleaning demands of a dental surgery. **Dental Practitioners correctly using Dentisan can be confident that their working environment is biologically clean and safe.**

What's more, the Claudius Ash sales team has received extensive infection control training from Dentisan and is therefore qualified to offer expert advice to customers. A Dentisan CPD module is also being developed too, allowing surgery management to be certain that their staff and patients are completely safe from pathogens, and that **their surgery is fully compliant with new and pending legislation.**

Dentisan offers a one stop shop solution for dental practices, with a compact range of non-overlapping products each designed for a specific task, each with a clearly defined area of application, and each formulated to make choosing the correct product quick and easy. A simple application chart details the range and will be available free from the Claudius Ash stand at the BDA conference.

The products result from many years of experience in supplying specialised surface cleaners and disinfectants to medical laboratories, universities and high tech manufacturers, and have been independently and rigorously tested against the confusing array of products currently available. **Most recently Dentisan Biocleanse, having been developed in conjunction with the Health Protection Agency and the Hospital Infection Research Laboratory because of its ability to combat harmful pathogens, has become the product of choice in many of the microbiological areas of the NHS, including Pathology, Immunology, Blood Services, Histopathology and Mortuary.**

The Dentisan range includes:

Wide spectrum disinfectant cleaners in ready to use, wipe and concentrate forms. This product is effective against a wide variety of pathogens and surface contaminants.

A non-foaming disinfectant detergent for suction systems.

A highly surface active cleaner for instruments that can be used with ultrasonics or manually.

Liquid detergents and a complimentary rinse aid for use in washer disinfectors.

NOTES

The complete Dentisan range is available exclusively from Claudius Ash (www.cladiusash.co.uk, Customer Services 0500 500 322) and is being formally launched at the BDA conference on May 1st 2008.

For the full range of Dentisan products and their applications, please download a Product Application Guide, see Images of Dentisan Products section below.
